

Waveform Low Table

The Waveform Low Table is a one-of-a-kind unconventional object that reinterprets handmade furniture as functional sculpture. Precious antique hardwoods like Dade County Pine and Cypress have been reclaimed from South Florida homes and transformed through lamination and digital laser-cutting. The elegant geometry of its pierced surface plays with shifting light and shadows while its solid wood surface beautifully balances atop a pair of stainless steel curves.

MATERIALS

Laser-cut reclaimed hardwoods (Dade County Pine, maple, oak, teak, mahogany, and cypress), stainless steel.

The solid wood top measures 0.94" thick and was laminated using Titebond III Ultimate Wood Glue and finished by hand with Rubio Monocoat Pure.
